

Project Initialization and Planning Phase

Date	02 October 2026
Team ID	SWTID-2026-7991
Project Title	EduGenie: Google Gemini Powered Learning Assistant
Maximum Marks	5 Marks

The proposal aims to provide students with an AI-powered learning assistant using Google Gemini. EduGenie supports question answering, simplified concept explanations, summaries, quizzes, and personalized learning guidance in one student-friendly platform.

happier customers. Key features include a machine learning-based credit model and real-time decision-making.

Project Overview	
Objective	Build an AI-powered learning assistant that gives students quick, simplified and useful academic support through Google Gemini.
Scope	Q&A, concept explanation, educational-text summarization, 3-question quizzes and personalized learning recommendations.
Problem Statement	
Description	Students may struggle with complex concepts, lengthy content, limited practice and the need for immediate learning support.
Impact	A single AI learning assistant can make study support more accessible, organized and easier to use.
Proposed Solution	
Approach	Use Google Gemini through a backend service to process student prompts and generate explanations, summaries, quizzes and learning guidance.
Key Features	- AI Q&A and concept explanation - Text summarization - 3-MCQ quiz generation - Personalized learning path

	- Google Gemini-powered responses - Student-friendly learning experience

Resource Requirements

Resource Type	Description	Specification / Allocation
Hardware	Computing resources	Cloud/server environment; GPU optional for local experimentation
Hardware	Memory	Minimum 8 GB RAM for development environment
Storage	Project files, logs and data	SSD/cloud storage as required
Software	Backend framework	FastAPI / Python
Software	Frontend	React + Vite
Libraries / APIs	AI service	Google Gemini API
Development	IDE / version control	VS Code, Git, GitHub
Data	Learning content	Student prompts, generated responses and quiz results
