

Coding & Solution

Date	02 October 2026
Team ID	SWTID-2026-7991
Project Name	EduGenie: Google Gemini Powered Learning Assistant
Maximum Marks	5 Marks

Coding & Solution

This section evaluates the quality and completeness of the EduGenie implementation. The solution uses React + Vite for the frontend, FastAPI + Python for backend services, Google Gemini for AI-powered learning, and SQLite for structured application data.

Instructions:

1. Code is structured into modular frontend and backend components.
2. The solution implements Q&A, explanations, summaries, quizzes, and personalized guidance.
3. Source, configuration, and setup files are maintained for running the application.
4. Version control is maintained using Git/GitHub.

Solution Summary

Field	Details
Repository Link / URL	GitHub repository - to be added / updated by the team
Programming Language(s)	Python, JavaScript
Framework(s) Used	FastAPI, React, Vite
Key Features Implemented	AI Q&A; concept explanation; educational-text summarization; 3-MCQ quiz generation; personalized learning guidance
Pending / Incomplete Features	Deployment-specific configuration and final repository URL, if not yet finalized
Setup / Run Instructions	Create/activate virtual environment; install backend dependencies; configure Gemini API key; start FastAPI; install frontend dependencies; run React/Vite frontend.

Code Quality Checklist

Code Quality Checklist

S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / components	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

Additional Notes / Comments:

EduGenie follows the defined technology stack and implements the core learning-assistant workflow. Final deployment and repository details should be updated when the project submission is finalized.
