

## Project Executable Files

|               |                                                    |
|---------------|----------------------------------------------------|
| Date          | 02 October 2026                                    |
| Team ID       | SWTID-2026-7991                                    |
| Project Name  | EduGenie: Google Gemini Powered Learning Assistant |
| Maximum Marks | 3 Marks                                            |

### Project Executable Files

This section requires submission of all executable and deployable files for the EduGenie project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run the solution using the provided files and instructions.

#### Step 1: Submission Checklist

| S.No | Item to Submit                                           | Submitted (Yes / No / NA) |
|------|----------------------------------------------------------|---------------------------|
| 1    | Complete source code (all files and folders)             |                           |
| 2    | README / Setup Guide                                     |                           |
| 3    | requirements.txt / package.json / dependency file        |                           |
| 4    | Database schema / seed files (if applicable)             |                           |
| 5    | Environment configuration file (.env.example or similar) |                           |
| 6    | Deployed application URL (if hosted)                     |                           |
| 7    | APK / Executable binary (if applicable)                  |                           |
| 8    | Dockerfile / Containerization config (if applicable)     |                           |
| 9    | Test files and test results                              |                           |
| 10   | Demo video or walkthrough (if required)                  |                           |

## Step 2: File / Folder Structure

Provide an overview of the EduGenie project's file and folder structure below. Update the names to exactly match the final executable submission.

| Path / File                     | Purpose                                                |
|---------------------------------|--------------------------------------------------------|
| frontend/                       | EduGenie user interface files                          |
| backend/                        | Backend/API request handling                           |
| static/                         | Styles, scripts and frontend assets (if used)          |
| templates/                      | HTML templates (if used)                               |
| .env.example                    | Example environment configuration without real secrets |
| requirements.txt / package.json | Project dependencies                                   |
| README.md                       | Installation and run instructions                      |
| tests/                          | Test cases and test results (if included)              |

The exact structure should be updated to match the files actually submitted.

## Step 3: Deployment / Access Details

| Field                       | Details                                           |
|-----------------------------|---------------------------------------------------|
| Hosted / Deployed URL       | To be added after deployment                      |
| Login Credentials (Demo)    | To be added only if authentication is implemented |
| Platform / Hosting Provider | To be added                                       |
| Repository Link             | To be added                                       |
| Demo Video Link             | To be added if required                           |

## Step 4: Run Instructions

1. Install the required runtime and dependencies listed by the project.
2. Create the environment configuration from the provided example file.
3. Add the required Gemini API credential securely to the local environment.
4. Start the EduGenie backend/application using the command documented in README.md.
5. Open the application URL shown by the running server.
6. Submit a learning question and verify the Gemini response.
7. Use the project's test instructions to verify the main functions.

## Step 5: Known Issues / Limitations

| S.No | Known Issue / Limitation                                  | Workaround / Status                      |
|------|-----------------------------------------------------------|------------------------------------------|
| 1    | Gemini API availability or quota can affect responses     | Verify API configuration and quota       |
| 2    | Network connectivity is required for cloud AI requests    | Use a stable internet connection         |
| 3    | Response time can vary with request size and service load | Record actual performance during testing |

### Team Details

| Role        | Name                                               |
|-------------|----------------------------------------------------|
| Team Leader | Mohamed Thariq                                     |
| Member      | Nandha Kumar                                       |
| Member      | Muniyappan                                         |
| Member      | Mohanakrishnan                                     |
| Team ID     | SWTID-2026-7991                                    |
| Project     | EduGenie: Google Gemini Powered Learning Assistant |

### Final Submission Reminder

Submit only the actual executable/source files and real links used by the final EduGenie implementation. Replace all 'To be added' fields before final submission.
